

OC Core 1.3 / Systems / Civilizational projection Domain Packet

Status Snapshot

- Current state: EMPIRICAL_HARD_CLOSED
- Target state: EMPIRICAL_HARD_CLOSED
- Quantitative pass result: PASS
- Next required action: MAINTAIN_REPLAY_DISCIPLINE
- Replay status: PASS_REPLAYABLE

Theorem-to-Observable Map

- K8 projection claims are restricted to measurable macro-process trajectories and regime-shift signatures on pinned official series.
- The packet is source-native only at the bounded projection level and does not authorize unrestricted civilizational prediction.
- Validation is lawful only through held-out interval replay against official macro/process data.

Benchmark Dataset Manifest

- SYS_BENCH_001: population_trajectory_residual | World Bank Indicators API | <https://api.worldbank.org/v2/en/indicator/SP.PO>
| held-out: leave out one interval family
- SYS_BENCH_002: gdp_growth_turning_point_error | World Bank Indicators API | <https://api.worldbank.org/v2/en/indicator/NY>
| held-out: reserve one held-out macro interval
- SYS_BENCH_003: process_system_regime_score | World Bank Indicators API | <https://api.worldbank.org/v2/en/indicator/EG.US>
| held-out: reserve one resource-intensity curve family

Pinned Official Route Protocol

- SYS_ROUTE_001: World Bank (OFFICIAL_OPEN_DATA_API_DOCS) -> <https://datahelpdesk.worldbank.org/knowledgebase/about-the-indicators-api-documentation> | purpose: Pinned macro indicator route and API semantics
- SYS_ROUTE_002: U.S. Department of Energy Office of Science (OFFICIAL_CHALLENGE_PROGRAM) -> <https://science.osti.gov/ascr> | purpose: Process-systems and high-performance systems benchmark framing

Measurable Outputs

- trajectory_residual
- turning_point_error
- held_out_interval_regime_score

Measurement Schema

Evaluate K8 projection packets against pinned official macro-process series with held-out interval tests.

Acceptance Criterion

Declared trajectory and regime-change observables remain inside tolerance on held-out intervals.

Falsifier

A missed turning point or out-of-band held-out trajectory falsifies the promoted systems packet.

Quantitative Acceptance Thresholds

- brier_score_max: 0.08
- coverage_ratio_required: 1.0
- critical_failure_fl_min: 0.87
- critical_failure_precision_min: 0.85
- critical_failure_recall_min: 0.9
- expected_calibration_error_max: 0.05
- tail_breach_count_max: 0

Replay Harness

- Replay command: `logion/k7/spe/orchestrator/science/run_oc_core_domain_hard_closure_replay_v1.py --domain-id SYSTEMS_CIVILIZATIONAL_PROJECTION`
- Replay program status: `ACTIVE_REPLAY_LANE`
- Execution protocol id: `OC13::EXECUTION::SYSTEMS::MACRO_TRAJECTORIES_AND_REGIME_SHIFTS`
- Evidence bar: `HYBRID_ESCALATION`

Institute-run Escalation

- Current escalation status: `NOT_REQUIRED`
- Escalation trigger: `OPEN_DATA_COVERAGE_LT_1_0_OR_HELD_OUT_INTERVAL_COUNT_LT_30_OR_TURNING_POINT_BREACH_P`
- Measurement wave id: `INSTITUTE_RUN::SYSTEMS::WAVE_4A`
- Measurement plan: Acquire partner or institute-run observation programs for the missing macro-process lane and rerun the held-out interval evaluation without broadening civilizational claims.

Blocking IDs

- None.
