# 1 Ontology of Continua Core 1.3.3

Version: 1.3.3 Tag: v1.3.3 DOI: 10.5281/zenodo.19964718 Zenodo record: <https://zenodo.org/records/19964718>

## 1.1 Release Boundary

OC Core 1.3.3 is a bounded external-review scientific release. It contains a typed model foundation, theorem/proof evidence, a Lean-checked subset, finite-model semantics, target-blind numeric reconstruction rows, comparator positioning, adversarial-review closure, and journal owner-review packets.

The release does not claim final completion of every future scientific projection. It does not submit journal packages. It does not claim universal superiority over all modern science. Those broader ambitions remain in the background research program and require additional evidence before public promotion.

The public GitHub and Zenodo publication is owner-approved for this release phase. Journal submissions, email campaigns, and Software Heritage actions require separate approval.

## 1.2 Lean Formalization Subset

The Lean subset is a machine-checked subset of the OC 1.3.3 theorem surface. The release does not claim that every mathematical or empirical statement is fully formalized in Lean. - **certificate state:** - **theorem ref total:** 10 - **missing theorem ref total:** - **Lean file:** formal/lean/OC133V12.lean

## 1.4 Target-Blind Numeric Evidence

The empirical section reports bounded target-blind reconstruction rows over pinned official snapshots. These rows support model-core external review; they do not claim complete domain validation. - **lane total:** 5 - **failure total:** 0 - **support policy:** Rows are target-blind held-out reconstructions over pinned official snapshots. They support bounded numeric reconstruction claims only, not broad domain validation or novelty. - **domain validation policy:** NO\_EMPIRICAL\_PASS\_FROM\_OFFICIAL\_SNAPSHOT\_REPLAY\_QA

#### 1.4.1 Physics - OC133-TARGETBLIND-PHYSICS-001

- **snapshot:** validation/\_raw/physics\_nist\_constants.txt
